

A.Y 2024-25(Even Sem)

Report on PSR Activity: Super AI Community Stakeholder Connect

Objective:

The aim of these activities is to build students' knowledge in Artificial Intelligence (AI) and Machine Learning (ML) by exposing them to real-world applications in diverse sectors, such as healthcare, finance, and gaming. Through peer learning, expert sessions, and practical workshops, students will enhance their technical and problem-solving skills. These initiatives also focus on career readiness by providing guidance on placements, entrepreneurship, and participation in national-level hackathons, helping students prepare for success in the fast-evolving AI/ML industry.

Following activities are done during Academic Year 2024-25 Even Semester:

Activity 1: Peer Learning Session on “AI and Robotics in Manufacturing”.

Date: 19 Jan 2025

Time: 10:00 PM - 11:30 PM

Mode: Online

Speaker: Akshaya Vennikal (BT AI&ML Student)

Participants: ST Students

Objectives:

- To understand the role of AI and robotics in manufacturing processes.
- To explore current trends and applications in smart manufacturing.
- To introduce key technologies like machine learning, cobots, and automation systems.
- To encourage collaborative peer-to-peer learning and discussion.
- To inspire interest in AI-driven careers and research in industrial domains.

Description:

This peer learning session focused on “AI and Robotics in Manufacturing” aims to promote awareness and knowledge sharing among students about the integration of cutting-edge technologies in modern industries. Participants engaged in an interactive session covering real-world applications, emerging tools, and the future of intelligent manufacturing. Through discussions, demonstrations, and shared insights, the session created a platform for collaborative exploration of Industry 4.0 concepts.

Activity Photo:

Participation Analysis:

Sr. No.	Class	No. of Students
1	ST	71
Total:		71

Outcome:

As a result of the peer learning session on “AI and Robotics in Manufacturing,” students gained a foundational understanding of how artificial intelligence and robotics are transforming modern manufacturing processes. They became familiar with real-world examples and technologies used in smart factories, enhancing their awareness of current industrial trends. The session encouraged active peer interaction and exchange of ideas related to automation and innovation, fostering a collaborative learning environment.

Activity 2: General Aptitude Test.

Date: 23 Feb 2025

Time: 5:00 PM to 6:00 PM

Mode: Online

Participants: ST Students

Objectives:

- To assess students' logical reasoning and problem-solving skills.
- To evaluate quantitative and verbal aptitude abilities.
- To help students identify their strengths and areas for improvement.
- To prepare students for competitive exams and placement processes.
- To build confidence through practice in a timed test environment.

Description:

The General Aptitude Test was conducted to assess students' abilities in quantitative reasoning, logical thinking, and verbal skills. The test comprised multiple-choice questions covering topics such as arithmetic, data interpretation, logical puzzles, and English comprehension. Conducted under timed conditions, the activity aimed to simulate real-world exam scenarios often encountered in campus placements and competitive exams.

Activity Photo:

Two boats A and B are rowing in two different rivers M and N respectively. * 1 point

Find the distance covered by boat B in 12 hours downstream.

i) Boat A can cover 360 km downstream in 6 hours while B can cover 96 km upstream in 4 hours.

ii) Speed of streams $(M + N) = 7$ km/hr

iii) Distance cover by B in y hours downstream is 150 km more than the distance cover by B in $(y+5)$ hours upstream.

- ☐ Only i
- ☐ Only i and ii together
- ☐ Only i and iii together
- ☐ None of these

Participation Analysis:

Sr. No.	Class	No. of Students
1	ST	62
Total:		62

Feedback Analysis:

Outcome:

Through this activity, students gained insights into their problem-solving approaches and time management skills. The test helped them evaluate their preparedness for aptitude-based assessments commonly used in job recruitment and entrance exams. Many students identified key areas requiring improvement and felt more confident in approaching such tests in the future.

Activity 3: Expert Session on Medical Image Analysis using Deep Learning.

Date: 16th March 2025

Time: 12:00 PM to 2:00 PM

Mode: Online

Speaker: Naeem Sayyad

Participants: ST Students

Objectives:

- To introduce students to the fundamentals of medical image analysis.
- To explain how deep learning techniques are applied in medical imaging.
- To familiarize participants with real-world healthcare applications using AI.
- To provide insights into current research and challenges in the domain.
- To inspire students to explore interdisciplinary applications of deep learning.

Description:

The expert session on “Medical Image Analysis using Deep Learning” aimed to expose students to the transformative role of AI in the healthcare sector. An industry expert delivered an in-depth talk covering the basics of medical imaging, common datasets, deep learning models like CNNs, and their use in diagnosing diseases through radiology, MRI, and CT scans. The session also addressed current research trends, practical challenges, and ethical considerations in medical AI.

Activity Photo:

Participation Analysis:

Sr. No.	Class	No. of Students
1	ST	45
Total:		45

Feedback Analysis:

How effective were the visual aids or resources (e.g., slides, codes) used by the speaker in enhancing understanding?

15 responses

Outcome:

Participants developed a foundational understanding of how deep learning models are used in analyzing medical images. The session enhanced their awareness of real-world applications in disease detection and diagnosis. Students gained exposure to interdisciplinary research combining healthcare and artificial intelligence. It also sparked interest in pursuing projects, internships, or higher studies in medical AI and bioinformatics.

Activity 4: Workshop on IoT-based AI System Development for Smart Space.

Date: 16th March 2025

Time: 6:00 AM to 8:00 PM

Mode: Online

Speakers- Amar Singh

Participants: ST Students.

Objectives:

- To introduce the concept of smart spaces and their real-world applications.
- To explain the integration of IoT and AI technologies in system development.
- To provide hands-on experience in building IoT-based AI prototypes.
- To enhance understanding of sensor networks, data processing, and automation.
- To encourage innovation in smart environments through interdisciplinary learning.

Description:

The workshop on “IoT-based AI System Development for Smart Space” provided participants with an overview of how Internet of Things (IoT) devices can work in conjunction with Artificial Intelligence to create intelligent, responsive environments. The session covered the architecture of smart spaces, role of embedded systems, AI-based decision-making, and cloud integration. Participants also engaged in hands-on activities involving sensor data collection, edge computing, and automation logic.

Activity Photo:

Participation Analysis:

Sr. No.	Class	No. of Students
1	ST	49
Total:		49

Feedback Analysis:

How effective were the speakers in conveying their messages?

19 responses

Outcome:

Participants gained a clear understanding of how IoT and AI technologies can be combined to create smart environments. They learned about various hardware components, communication protocols, and data analysis techniques essential for developing intelligent systems. Through practical exposure, students enhanced their problem-solving and system design skills. The workshop also inspired interest in developing innovative projects related to smart homes, smart cities, and automation.

Activity 5: Workshop on Beyond the Basics: Exploring the Future of Blockchain & Web3.

Date: 22nd March 2025

Time: 6:00 PM to 7:30 PM

Mode: Online

Speaker: Hitansh Gopani

Participants: ST Students

Objectives:

- To deepen students' understanding of blockchain technology beyond foundational concepts.
- To explore the emerging trends and future applications of Web3 technologies.
- To introduce smart contracts, decentralized applications (dApps), and NFTs.
- To provide insights into real-world blockchain use cases in finance, supply chain, and identity management.
- To encourage students to explore research, innovation, and career opportunities in the blockchain and Web3 space.

Description:

The workshop titled “Beyond the Basics: Exploring the Future of Blockchain & Web3” aimed to take participants beyond introductory blockchain knowledge and immerse them in the evolving landscape of decentralized technologies. Experts discussed advanced concepts including smart contracts, decentralized finance (DeFi), NFTs, and DAO governance models. Attendees explored how Web3 is shaping the future of the internet with more privacy, ownership, and decentralization.
