

A.Y 2025-26(Even Sem)

Date: 04/05/26

Report on PSR Activity: Super AI Community Stakeholder Connect

Objective:

Designed to equip the next generation of tech professionals, these immersive learning experiences bring together industry mentors and peer-driven collaboration to deepen students' understanding of cutting-edge fields such as Agentic AI, blockchain ecosystems, and the ever-evolving landscape of data science. From aptitude-based assessments and hands-on technical workshops to career navigation sessions and real-world tool exposure, every component is thoughtfully curated to sharpen logical thinking, strengthen quantitative reasoning, and build the kind of practical, implementation-ready skills that today's AI and ML-driven industries demand. Far beyond traditional classroom instruction, this initiative bridges the gap between academic foundations and professional expectations, empowering participants to step confidently into roles across research institutions, technology enterprises, and the rapidly expanding frontier of intelligent systems.

Following activities were conducted during Academic Year 2025-26 Even Semester:

Activity 1: Aptitude Test 1 - Skill Development.

Date: 15 January 2026

Time: 5:00 PM to 5:30 PM

Participants: ST and TT Students

Objectives:

- To simulate a competitive exam environment and provide feedback. □
- To identify areas of improvement in quantitative, verbal, and logical reasoning. □
- To prepare students for upcoming technical and competitive assessments. □

Description:

The aptitude test aimed at assessing students' problem-solving and reasoning skills, focusing on analytical questions that simulate competitive exams. The test covered areas such as logical reasoning, quantitative aptitude, and verbal ability. It was structured with time constraints to prepare students for real-world exam scenarios. After the test, students were given feedback and strategies for improving their performance in future assessments.

Activity Photo:

Ravi deposits ₹5,000 in a bank at 10% annual compound interest. What will be the amount after 2 years? *

☐ ₹6,000

☐ ₹6,050

☐ ₹6,100

☐ ₹6,200

A car covers a certain distance from A to B at an average speed of 60 km/h. On the return trip, * due to traffic, it returns at 40 km/h. What is the average speed for the **entire journey**?

☐ 48 km/h

☐ 50 km/h

☐ 52 km/h

☐ 54 km/h

Participation Analysis:

Sr. No.	Class	No. of Students
1	ST	43
2	TT	3
Total:		46

Feedback Analysis:

Outcome:

The test helped students identify areas for improvement in their aptitude and logical reasoning skills. Feedback was provided, highlighting common mistakes and strategies for better performance. The test also fostered a spirit of healthy competition among peers, motivating students to enhance their problem-solving abilities.

PO Attained: PO2, PO9, PO11

Activity 2: Peer Learning Session 1 – AI for Cybersecurity & Threat Detection

Date: 26th January 2026

Time: 4:00 PM - 6:00 PM

Mode: Online

Speaker: Abhilash Tripathi, ML Engineer at Ceryle Innovative Technologies.

Participants: ST and TT Students

Objectives:

- To introduce students to the role of AI in modern cybersecurity systems.
- To explain threat detection techniques using Machine Learning models.
- To promote peer-to-peer learning and collaborative problem-solving.
- To encourage students to explore cybersecurity as a career domain.

Description:

A peer learning session was conducted on “AI for Cybersecurity & Threat Detection” to provide students with insights into how artificial intelligence is transforming the field of cybersecurity. The session covered key concepts such as anomaly detection, intrusion detection systems, and real-time threat analysis using machine learning algorithms.

Students discussed real-world applications where AI helps in identifying suspicious activities, phishing attacks, and malware detection. The interactive nature of the session allowed participants to exchange ideas, ask questions, and gain clarity on complex topics. The session successfully fostered collaborative learning and enhanced students’ understanding of AI-driven security systems.

Activity photo:

Participation Analysis:

Sr. No.	Class	No. of Students
1	ST	65
2	TT	21
Total:		86

Feedback Analysis:

Outcome:

- Students understood how AI is applied in cybersecurity.
- Participants gained knowledge of threat detection techniques.
- The session improved awareness of cybersecurity career opportunities.

PO Attained: PO1, PO9, PO1

Activity 3: Aptitude Test 2 - Skill Development.

Date: 8 February 2026

Time: 05:00 PM to 05:30 PM

Participants: ST, TT Students.

Objectives:

- To simulate a competitive exam environment and provide feedback □
- To identify areas of improvement in quantitative, verbal, and logical reasoning. □
- To prepare students for upcoming technical and competitive assessments. □

Description:

The aptitude test aimed at assessing students' problem-solving and reasoning skills, focusing on analytical questions that simulate competitive exams. The test covered areas such as logical reasoning, quantitative aptitude, and verbal ability. It was structured with time constraints to prepare students for real-world exam scenarios. After the test, students were given feedback and strategies for improving their performance in future assessments.

2	TT	1
Total:		46

Feedback Analysis:

Outcome:

The aptitude test aimed at assessing students' problem-solving and reasoning skills, focusing on analytical questions that simulate competitive exams. The test covered areas such as logical reasoning, quantitative aptitude, and verbal ability. It was structured with time constraints to prepare students for real-world exam scenarios. After the test, students were given feedback and strategies for improving their performance in future assessments.

PO Attained: PO2, PO9, PO11

Activity 4: Peer Learning Session 2 – Data Analytics & AI in Healthcare

Date: 22nd February 2026

Time: 11:00 A.M. to 01:00 P.M.

Mode: Online

Speakers: Aadil Rayeen

Objectives:

- To explain the importance of data analytics in healthcare.
- To introduce AI applications in diagnosis and patient care.
- To enhance understanding of real-world AI applications.
- To promote collaborative learning among students.

Description:

This peer learning session focused on “Data Analytics & AI in Healthcare,” highlighting how artificial intelligence and data analysis are revolutionizing the healthcare industry. Topics included predictive analytics, disease detection, medical imaging, and patient data management.

Students explored how AI models assist doctors in making accurate diagnoses and improving treatment outcomes. Real-life examples such as AI-based cancer detection and wearable health monitoring systems were discussed. The session created an engaging environment where students actively participated and shared knowledge.

Activity Photo:

Participation Analysis:

Sr. No.	Class	No. of Students
1	ST	49
2	TT	11
Total:		60

Feedback Analysis:

Outcome:

- Improved understanding of AI in healthcare.
- Awareness of data-driven decision-making in medical fields.
- Increased interest in interdisciplinary applications of AI.

PO Attained: PO3, PO5, PO9

Activity 5: Aptitude Test 3 - Skill Development.

Date: 21 March 2026

Time: 01:00 PM

Participants: ST, TT Students.

Objectives:

- To simulate a competitive exam environment and provide feedback ☐
- To identify areas of improvement in quantitative, verbal, and logical reasoning. ☐
- To prepare students for upcoming technical and competitive assessments. ☐

Description:

The aptitude test aimed at assessing students' problem-solving and reasoning skills, focusing on analytical questions that simulate competitive exams. The test covered areas such as logical reasoning, quantitative aptitude, and verbal ability. It was structured with time constraints to prepare students for real-world exam scenarios. After the test, students were given feedback and strategies for improving their performance in future assessments.

Activity Photo:

Q1. A number when divided by 7 leaves remainder 3. What is the remainder when its square is divided by 7? *

☐ A. 1

☐ B. 2

☐ C. 4

☐ D. 9

Q2. A and B together can complete a work in 12 days. B and C in 15 days, C and A in 20 days. Time taken by A alone? *

☐ A. 20 days

☐ B. 30 days

☐ C. 60 days

☐ D. 24 days

Participation Analysis:

Sr. No.	Class	No. of Students
1	ST	61
2	TT	0
Total:		61

Feedback Analysis:

Outcome:

The aptitude test aimed at assessing students' problem-solving and reasoning skills, focusing on analytical questions that simulate competitive exams. The test covered areas such as logical reasoning, quantitative aptitude, and verbal ability. It was structured with time constraints to prepare students for real-world exam scenarios. After the test, students were given feedback and strategies for improving their performance in future assessments.

PO Attained: PO2, PO9, PO11

Activity 6: Career Roadmap Talk – AIML Industry Trends

Date: 4th April 2026

Time: 6:00 P.M. - 8:00 P.M.

Mode: Online (Microsoft Teams)

Speaker: Satyam Rudrakanthwar, AI Solutions Developer at Network Science.

Objectives:

- To guide students about career opportunities in AIML.
- To explain current industry trends and required skills.
- To help students plan their career roadmap effectively.
- To motivate students towards continuous learning and upskilling.

Description:

A career guidance session was conducted on “AIML Industry Trends” to help students understand the evolving landscape of artificial intelligence and machine learning. The speaker discussed trending technologies such as Generative AI, MLOps, and Data Engineering.

The session also covered essential skills like programming, problem-solving, and project development. Students were guided on how to build a strong portfolio, prepare for internships, and stay industry-ready. The session was highly interactive, with students asking questions related to career paths and skill development.

Activity photo:

Participation Analysis:

Sr. No.	Class	No. of Students
1	ST	37
2	TT	5
Total:		42

Feedback Analysis:

1. How effective were the visual aids or resources (e.g., slides, codes, demos) used by the speakers in enhancing your understanding?

37 responses

Outcome:

- Students gained clarity about AIML career paths.
- Improved awareness of industry-required skills.
- Increased motivation for skill development and internships.

PO Attained: PO6, PO11

Activity 7: CodeHathon 3.0 – AI for Social Good

Date:

- **Day 1:** 9 April 2026
- **Day 2:** 10 April 2026

Time:

- **Day 1:** 3:30 PM – 5:30 PM (Online)
- **Day 2:** 1:30 PM – 4:30 PM (Offline)

Mode: Hybrid (Online + Offline)

Venue: Lab 307, 308 & 309 (Day 2)

Organized By: SuperAI in collaboration with ACM SIGAI TCET

Participants: ST and TT Students

Objectives:

- To enhance students' problem-solving and coding skills through competitive programming.
- To encourage teamwork, creativity, and strategic thinking.
- To provide hands-on experience in solving real-world problems using AI concepts.
- To foster a competitive and innovative coding environment among students.
- To motivate students to participate in technical events and improve their DSA skills.

Description:

CodeHathon 3.0, organized by SuperAI in collaboration with ACM SIGAI TCET, was a two-day coding competition designed to test students' analytical thinking, creativity, and programming skills.

Day 1 featured a Brainstorming Game, conducted online, where students participated in interdepartmental teams. This round focused on evaluating participants' logical thinking, problem-solving strategies, and teamwork through engaging and challenging tasks.

Day 2 was the Coding Showdown, conducted offline in college labs. Participants competed individually or in teams to solve coding problems based on Data Structures and Algorithms (DSA). The competition tested speed, accuracy, and efficiency in problem-solving under time constraints.

The event created a highly competitive and engaging atmosphere, encouraging students to apply their knowledge practically while interacting with peers. The inclusion of rewards, recognition, and AICTE activity points further motivated students to actively participate.

Feedback Analysis:

Participants responded positively to the event, appreciating the structured format of combining brainstorming with coding challenges. Students found the competition engaging, challenging, and helpful in improving their problem-solving and programming skills.

Participation Analysis:

Online Round: 60(ST&TT)

Offline Round: 40(ST&TT)

Activity Photo:

Outcome:

- Students improved their logical thinking and coding efficiency.
- Participants gained practical exposure to competitive programming.
- The event strengthened teamwork and strategic problem-solving abilities.
- Students became more confident in participating in hackathons and coding competitions.
- The initiative promoted a culture of innovation and technical excellence within the institution.
